CallScore

Internal review manual - a short guide for testing audio-call scoring

1. Configure Open Settings. Scribe v2 is the recommended high-quality default. Fish Transcribe 1 Pro is useful for testing native speaker labels. Save your model choices.	**2. Analyze** Upload a call recording (up to 25 MB) or paste a transcript. Add the rep name if known, then choose Analyze call.

What happens during analysis

Prepare	Reads the audio. With Scribe v2, the original audio is used to avoid slow browser re-encoding on long calls.
Transcribe	Speech becomes text. Scribe, Fish and MAI Transcribe 2 can provide speaker markers.
Tanglish + speakers	Tamil script is converted to readable Tanglish. Anonymous speaker markers are mapped to Rep or Customer.
Score	The analysis model reviews the full call against the sales rubric and creates coaching, objections and evidence.
Validate	Every cited quote is checked against the transcript and against the claimed speaker before it can affect the result.

How scoring works

CallScore scores eight areas: opening and rapport, lead context, discovery, active listening, solution fit, objection handling, closing, and compliance. Each area is rated from 0 to 3. The final result uses only verified, applicable evidence; it is not a simple summary generated from the transcript.

About Review notes
A note means a quote was removed because it was not found in the transcript or was attributed to the wrong speaker. This is a safety feature: removed evidence does not affect the score. A few notes can happen; repeated notes across categories mean the result needs human review.

Internal tester checklist

- Check the Transcript tab first: are the words understandable and are Rep and Customer correct?
- If the roles are reversed, choose **Swap roles and re-score**. It reuses the transcript and does not transcribe the audio again.
- Use Review notes to identify unsupported quotes. Do not treat a score with many removed quotes as final coaching.
- Record the model used, call length, timings, and trace ID when reporting a slow or failed run.

Internal test build - scores are decision support, not a replacement for manager review.
